

## My TableShield or Table Guardian is in two pieces. Can I have them symmetrical?

---

If our website says that the TableShield or Table Guardian you are ordering is going to be in two pieces, how we cut these depends on the total dimensions of your item.

For a Table Guardian, we usually cut the maximum width possible as one piece, and the remaining width into a second piece. This is the usual procedure, as the Table Guardian is meant to be placed underneath a tablecloth and so the unsymmetrical cut will not show.

For TableShields, we usually try to make multi-piece Shields symmetrical, however this may not always be possible.

If you want to instruct us of a specific way you would like your TableShield cut, please [email](#) us and let us know - we will then advise you of the feasibility.
